EDUCATION

- B.Sc. Computer Science
Faculdade GRAN · 2024-2027
- Postgrad — Full Stack Java Developer
FACINT · 2025-2026
- Postgrad — Project Management
Unigama · 2025
- Bachelor of Laws
Unigama · 2018-2022

LANGUAGES

- Portuguese · Native
- English · Advanced

SUMMARY

Full Stack Engineer working from architecture design to production monitoring, focused on **operational efficiency** and on products that deliver **real day-to-day productivity gains for companies**. I work on **two fronts**: at **AutoU** (an applied-AI startup, with projects for enterprise clients such as Saint-Gobain) and as a **full-cycle freelancer**, with multiple systems of my own **in production** for real clients. I focus on **automating manual workflows**, **applied AI** (LLMs, RAG, Computer Vision + YOLO, Prophet, Bayesian optimization with BayBE) and **enterprise integrations** (Sankhya/Microwork and SAP ERPs, Slack, Microsoft 365 / Graph, Entra ID) — reducing rework, preventing stockouts and accelerating commercial decisions. I ship **scalable, cloud-native** software on AWS, GCP and Azure — and on **dedicated Linux VPSs** (Hostinger, Oracle Cloud, Contabo, KingHost, among others) for predictable 24/7 workloads — with CI/CD, containerization and **end-to-end observability** (Prometheus/Grafana, including AI cost), under **Clean Architecture, SOLID** and sustainable code. Core stack: **Java + Spring Boot 3.x** and **Python (FastAPI, google-genai, LangGraph)**, with Angular and React on the front end. Bachelor of Laws — a background that adds analytical reading of business rules and regulated domains.

EXPERIENCE

Full Stack Developer – full cycle

Feb/2026 – Present

AutoU · Remote

- Architected a **24/7 production** monitoring pipeline combining **Computer Vision (YOLO at the edge) + LLM** via **google-genai**, **LangGraph** and **RAG** for a gas station chain — analysis and insights of detected occurrences generated with **GenAI (Gemini)** —, with a **retraining loop** fed by user feedback (AWS S3/Lambda/DynamoDB + GCP) and capture via **RTSP straight from the client's Intelbras DVR** (secure external port via NAT, reusing existing hardware) — pilot live with **2 stations monitored** and planned expansion to the chain's **~50**.
- Implemented **production observability on my own initiative** (**Prometheus** + **Grafana**), monitoring **AI cost and compute budget**, usage and infrastructure across the computer vision and chemical R&D projects.
- Evolved predictive algorithms with **Prophet** (time series) for demand forecasting and daily purchase recommendations, with an **in-house inter-branch transfer algorithm** (respecting each branch's historical needs) and substitute-product resolution, integrated with the **Sankhya ERP** — in production, generating savings every day.
- Rebuilt the plant-to-plant savings replication pipeline (Saint-Gobain): automated previously manual spreadsheet-based integrations, created an API and fixed legacy failures, as Cloud Run Jobs + Scheduler running daily in production — recommendations that have already generated **~R\$ 13-15 million in savings**.
- Modernized the previously manual chemical R&D process (greenhouse trial and error) into an automated platform with **generative AI** assistance (Gemini via **google-genai**) — the "Colibri" agent — and stability recommendation via **Bayesian optimization (BayBE)** — in production for the fertilizer industry.
- Built **alone** the AI-powered SAC triage assistant demo for a **pharma public bid** (in progress) — chat with **Gemini** + deterministic fallback + internal ticket portal — and **AutoU's institutional website**, with a custom CMS and e-mail intake via **Microsoft Graph** (Azure app) feeding the CRM funnel — both live.
- In a **DDD monorepo** (5 bounded contexts, database-per-service), delivered the **notifications feature** (dedicated service consuming events via Pub/Sub) with delivery via **Slack and Outlook** — my integrations, used by all of the company's employees — and the **logging system** of the B2B people-management platform.
- Implemented **corporate integrations (Sankhya/Microwork ERP, Slack and Outlook/Microsoft 365)** for reports, quotes, real-time notifications and transactional e-mails.
- Provisioned **multi-cloud** infrastructure — AWS (EC2, S3, Lambda, DynamoDB), GCP (Cloud Run, Jobs, Scheduler, Pub/Sub) and Azure — with **Docker Compose** and **GitHub Actions**, ensuring continuous delivery.
- Acted as **technical lead of workstreams** on team projects (chemical R&D and computer vision), in **constant contact with clients** — weekly checkpoints and ad-hoc alignment sessions, with positive feedback for the partnership — and active in the **code review** workflow, the agile ceremonies (Jira always up to date) and supporting the company's individual development plan (PDI) program.

Full Stack Developer – full-cycle freelancer

2025 – Present

Own products and direct clients · Remote

- I operate as the **sole developer** across the entire cycle — commercial proposal, architecture, code, deployment and support — with multiple systems **in production** running real clients' day-to-day operations.
- AOG Dux Truck** (in production) — emergency aircraft-parts logistics: **Java 21 + Spring Boot 3 (Clean Architecture) + Angular 20, Microsoft Entra ID** authentication, per-demand tracking screen with chat and a traceable timeline — reducing e-mail/phone chasing.
- Fiscal NF-e automation** (in production) — invoice capture from e-mail via **Microsoft Graph** with layered extraction (deterministic XML → PDF → OCR/AI as fallback), eliminating manual data entry — **20 to 100 NF-e/day**, thousands already processed (**FastAPI + React**).
- Sol** (in production) — omnichannel IT service desk with AI: **WhatsApp, Teams, web and e-mail, 20-50 tickets/day**, satisfaction gauge via conversation sampling, ticket management and an **integrated CRM** (FastAPI + Angular 20 + pgvector + Gemini + Evolution/Meta WhatsApp Cloud API).
- Qualtrics CX Dashboard** (in use by the operation) — customer experience by journey, with a **TypeScript MCP server** for the Qualtrics API and a portable desktop build with auto-update.
- Mercearia R&V** (in production) — **offline-first** desktop POS/inventory/sales system: Electron orchestrating **embedded Spring Boot + PostgreSQL** in a single NSIS installer — daily use in the client's operation at zero recurring cost.
- Experimenta AI – Soneca** (in production for ~3 months, **~R\$ 300k/month in sales**) — full snack-bar management: counter, **table ordering via QR code, self-service kiosk** and cross-platform **ESC/POS printing**, plus an own delivery ecosystem built in **Java 17 + Angular 20** (customer/courier PWAs, **real-time tracking** GPS → TTL cache → SSE, Google Maps Platform), currently deactivated.
- Logistics workflow platform** (complete, in UAT) — replaces a corporate BPM: multi-step approvals, per-group queues, SLAs and dashboard (Java + Spring + Angular + PostgreSQL, Oracle Cloud VPS); plus a **frontend renewal** in Next.js 16 + Tailwind 4 for an EDI logistics integrator.

Full Stack Developer – scrum team

Apr/2025 – Apr/2026

ANBIMA / Selic (partnership with the Central Bank of Brazil) · Rio de Janeiro, Brazil · Hybrid

- Worked on the **modernization of Novo-Selic**, migrating a critical system of the national financial infrastructure from **COBOL mainframe** to a **Java 17 + Spring Boot 3.x + Angular** architecture, with persistence on **Oracle Database**.
- Implemented a full observability stack (**Prometheus**, **Grafana**, **Spring Actuator**, **Micrometer**, **Blackbox Exporter**, **AlertManager**), enabling metrics monitoring, healthchecks and SLAs in a mission-critical environment.
- Containerized applications with **Docker** and structured **CI/CD pipelines on GitLab**, automating build, tests and deployment with strict branch versioning.
- Versioned Oracle schemas with **Liquibase** and SQL scripts, ensuring traceability and controlled rollback on a sensitive transactional database.

IT Projects / Governance

Apr/2024 – Apr/2025

ANBIMA / Selic (partnership with the Central Bank of Brazil) · Rio de Janeiro, Brazil · Hybrid

- Built **SharePoint webparts** (JavaScript, HTML, CSS) integrated via the SharePoint API and **Power BI (DAX)** dashboards for executive indicators, serving C-level demands (Central Bank and ANBIMA).
- Applied **PMI, Agile, MPS.BR and CMMI** frameworks in initiatives aligned with the **PDTIC**, standardizing processes and sustaining IT governance deliveries.

Automation & Legal Assistant

Nov/2019 – Apr/2024

Gondim, Albuquerque e Negreiros Law Firm · Rio de Janeiro, Brazil · On-site

- Built an **RPA** architecture with **Python**, **VBA** and **Selenium** for large-scale data extraction from Brazilian courts, integrating internal systems with judicial platforms and significantly reducing case registration time.
- Structured the management of court diligences, judicial deposits and fees with automations, raising database integrity and the accuracy of the firm's operational indicators.

Analytics / Salesforce

Oct/2018 – Oct/2019

Philip Morris International · Rio de Janeiro, Brazil · On-site

- Automated data collection, report generation and commercial KPI analysis with **VBA/Excel** and Salesforce, reducing the time spent on administrative routines.

Administrative Assistant — Production

Apr/2017 – Sep/2018

Liquigás / Petrobras Distribuidora S.A · Duque de Caxias, Brazil · On-site

- Operated **SAP** and Excel for operational management, quality control and service support (first exposure to a corporate ERP).

RELEVANT PERSONAL PROJECTS

- LoL Fazenda Inhouse** — Competitive matchmaking platform (FastAPI + **gRPC** + Angular 20 + Electron 28 + PostgreSQL/Alembic), League Client (LCU) integration and a Discord bot (JDA). Architectural migration Java/Spring/Redis → Python/gRPC.
- Wesley Bot WhatsApp** — Conversational assistant with **RAG** (FastAPI + FAISS + Gemini + Evolution API), agentic flow, XLSX export and TTS, in production 24/7 on Oracle Cloud.
- Publique Sua Notícia Popular** — Full-stack platform (Spring Boot 3.4 + Angular 21 + PostgreSQL 16) with Google OAuth, JWT, a block-based editor and an LLM-powered editorial assistant (Gemini).
